Project Description

Project Overview:

This is my project, named **Bodyshape Gym Website.** Actually it is a responsive landing page. It is designed using HTML and Tailwind CSS, based on a given Figma design. The goal of this project is to recreate a professional and visually appealing landing page.

Technologies Used:

- **HTML** – For structuring the webpage content.
- **Tailwind CSS** – For styling, layout, and responsiveness.
- **Font Awesome** – For adding icons to enhance the design.
- **GitHub** – For version control and code storage.

Challenges Faced:

During the development of this project, I faced several challenges:

1. Matching the Figma design exactly. Specially in terms of spacing, alignment, and typography.
2. Implementing custom fonts correctly with Tailwind CSS.
3. Making the page responsive for all devices (desktop, tablet, and mobile).
4. Managing GitHub commits.
